COVID-19 vaccine for kids aged 5 to 11

Health Canada has given the green light to a pediatric (child's) formulation of the Comirnaty (Pfizer-BioNTech) COVID-19 vaccine.

6 great reasons to vaccinate kids:

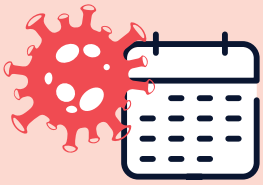
ONE

Protects them from serious COVID-19 illness, hospitalization and death

TWO

Protects against long-term effects of COVID-19

such as MIS-C (multisystem inflammatory syndrome) and long COVID



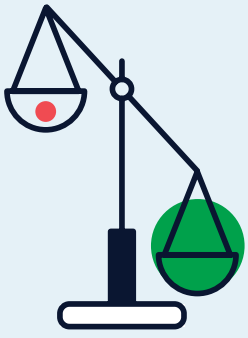
THREE

We can't predict which children will become severely ill or get long COVID

(symptoms that last for months)

FOUR

Benefits FAR outweigh risks



FIVE

Allows children to get back to doing things they love and miss

SIX

Vaccinations contribute to community immunity and a path back to normalcy

Register and book your child with the Get Vaccinated system
