First Nations Health Authority
Health through wellness

This data includes only Status First Nations people and their status-eligible descendants. Additionally, our data is limited to biological sex at birth, which may misidentify two-spirit, transgender, non-binary, intersex, and gender diverse people. Data are collected as of February 2024, and are subject to change.

The FNHA gratefully acknowledges the health partners that make this data available: BC Centre for Disease Control, BC Coroners Service, BC Emergency Health Services, and the BC Ministry of Health.

Events of First Nations People BY GENDER

♂ 62.0%
Male

♀ 38.0%
Female

Events of First Nations People BY AGE

26.1%
40 Years and Older

73.9%
Younger than 40

First Nations People are Disproportionately Represented in Toxic Drug Poisoning events

First Nations people make up 4.5% of the region's population.

23.5% of toxic drug poisoning events in 2023 were First Nations people.

NOTES

- Most toxic drug poisoning events are non-fatal and represent when paramedics were called and responded to a poisoning. Events that were treated successfully in community and events where 9-1-1 was not called are not captured in this data
- Event data is only collected for people with documented BC Personal Health Numbers (PHNs), and is therefore likely an underestimate, due to missing PHNs for some events
